

Steps to Embed a video on the Wiki:

1. Click on your video choice above. This will open a new tab in your browser on the page where your video is located.
(If you have never used tabs in a browser before, check out the [How To](#) page to find out more about tabs).
2. Copy the Embed code for this video. (For this video, it is located below the video.)
To copy, click on the box next to the word embed and then right click and select Copy.
3. Select your original tab which displays this page on the wiki.
4. Select your individual teacher page by selecting your name on the [Teacher Page](#).
5. Sign in (if you haven't already)
6. Select "Edit" from the navigation bar.
7. Place your cursor under **Workshop 3 - Web 2.0 tools** - where it says
<embed your video here>
8. Now select **Widget** from the edit tool bar.
9. Click on Video in the left navigation bar of the Widget pop up screen.

Embed code using YouTube. Our example will look similar but have the title
[Add your favorite media clips and applications to your wiki in three easy steps](#)
10. Click on the location of the video - in our example, the video comes from National Geographic. This is not a specified selection on the pop up window, so select Other Video. If you chose a YouTube, for example, you would select YouTube video.
11. Insert the "Embed" text from the National Geographic page page into the white box on the Widget window.
12. When the embed code is inserted, click Save.
13. On your Teacher Page, above the video embed, add a Title or Text to accompany your embedded video widget, to let viewers know what it is, where it came from, and why this video is useful. Adding spaces after the video widget (the light blue box that appears on the page when you have embedded a video but are still in Edit mode) will help you edit the page in the future. If you accidentally delete your video widget, it's ok; just repeat the embed procedure.
14. "Save" your page.

Now you have a video embedded on your Teacher Page. **Congratulations!**
